Question:

Suppose the demand for a product increases due to a new health trend. Describe what happens to the equilibrium price and quantity, and explain why.

Coach Answer Breakdown:

- Step 1: Recognize that an increase in demand shifts the demand curve to the right.
- Step 2: Graphically, the new demand curve intersects the supply curve at a higher point.
- Step 3: As a result, both the equilibrium price and quantity increase.
- Step 4: The increase in price occurs because higher demand creates upward pressure on prices.
- Step 5: The increase in quantity supplied occurs as producers respond to higher prices by producing more.
- Conclusion:

The equilibrium price rises, and quantity demanded increases because the demand shift causes a new intersection point at a higher price and output level.

How to Use This:

Study each step and understand the rationale behind shifts, graphs, and price/quantity changes. Practice similar scenarios to reinforce this concept.
