What Are the Principles of Accounting?

The principles of accounting are a set of standardized guidelines that govern the recording, reporting, and interpretation of financial data. These principles ensure consistency, reliability, and comparability of financial statements across different entities and periods.

Only transactions measurable in monetary terms are recorded in the books of accounts. Non-monetary information is excluded.

- The Going Concern Principle

Assumes that a business will continue to operate in the foreseeable future unless there is evidence to the contrary.

- The Cost Principle

Assets are recorded at their original purchase cost, not their current market value.

- The Accrual Principle

Transactions are recorded when they occur, not when cash is received or paid, enabling matching of revenues and expenses.

- The Consistency Principle

Accounting methods should be applied consistently across periods to allow comparability.

- The Conservatism Principle

In cases of doubt, accountants should choose the option that results in lower profits or asset values to avoid overstatement.
