Sample Questions and Their Solutions from the 9th Edition

Descriptive Statistics Exercise

Question: Given a dataset of sales figures, calculate the mean, median, and mode.

Answer:

- Mean: Sum all sales figures and divide by the number of data points.
- Median: Arrange data in order and identify the middle value.
- Mode: The value that appears most frequently.

Explanation: These measures help summarize the central tendency of sales data, aiding in understanding typical sales performance.

Probability Problem

Question: If the probability that a customer makes a purchase is 0.3, what is the probability that in a random sample of 10 customers, exactly 3 make a purchase?

Answer:

Use the binomial probability formula:

$$P(X=3) = C(10,3) (0.3)^3 (0.7)^7$$

Calculations yield the probability, which helps in forecasting sales outcomes.

Regression Analysis Task
