Understanding Phased Array Ultrasonic Testing

What is Phased Array Ultrasonic Testing?

Phased array ultrasonic testing is an advanced form of ultrasonic inspection that uses multiple piezoelectric elements to steer, focus, and scan ultrasonic beams electronically. Unlike traditional ultrasonic probes that require manual repositioning or mechanical scanning, phased array transducers can electronically manipulate the beam's direction and focus, providing detailed imaging of test objects.

This technology enables inspectors to perform complex inspections with greater speed, accuracy, and coverage. It is especially valuable for detecting and sizing flaws, weld inspections, corrosion mapping, and material characterization.

Core Components of Phased Array Systems
