QuestionAnswer How do I find the volume of a cube in a math word problem? To find the volume of a cube, multiply the length of one side by itself three times (side $\times$ side $\times$ side). In a word problem, identify the side length and then apply this formula. What is the formula for calculating the volume of a cube from a word problem? The formula is Volume = side length $\times$ side length $\times$ side length, or $V = s^3$, where 's' is the length of one side. How can I solve a word problem that asks for the volume of a cube with a given side length? Identify the side length provided in the problem, then cube that number (multiply it by itself three times) to find the volume. What units should I use when calculating the volume of a cube in a word problem? Use the same units given for the side length (e.g., centimeters, meters). The resulting volume will be in cubic units, such as cubic centimeters (cm³) or cubic meters (m³). How do I approach a word problem that involves finding the volume of a cube when the side length is given in different units? First, convert all measurements to the same unit before calculating. Then, apply the volume formula and include units in your final answer. What are common mistakes to avoid when solving cube volume word problems? Common mistakes include mixing units, forgetting to cube the side length, or misinterpreting the problem's details. Carefully read the problem and double-check your calculations. Can the volume of a cube be found if only the surface area is given? Yes, but you need to first find the side length from the surface area formula (Surface Area = $6 \times \text{side}^2$), then cube the side length to find the volume. Are there real-world applications of calculating the volume of a cube in word problems? Yes, calculating the volume of cubes is useful in packaging, storage, construction, and manufacturing to determine capacity or material requirements.

Find the impedance of an inductor $L=0.5H$ and capacitor $C=100\mu F$ at 60Hz.

Solution:

$$X_L = 2\pi fL = 2\pi \cdot 60 \cdot 0.5 \approx 188.5\Omega$$

$$X_C = 1 / (2\pi fC) = 1 / (2\pi \cdot 60 \cdot 100e-6) \approx 26.5\Omega$$

$$\text{Impedance } Z = \sqrt{(X_L^2 + X_C^2)} \approx \sqrt{(188.5^2 + 26.5^2)} \approx 190.3\Omega$$
